4	<i>Minimum Stock</i>	N	6	20	(kg)

Comments

The file contains two types of records:

The record of the type **Stock Date** defines the date and time of the stock take. (This date and time must be identical for all the papers). The file contains only one record of this type, and it must be the first record in the file.

The records of type **Paper Stock** represent the stock for one paper and one roll size at the given time and date. All the records in the file define the complete paper stock; PC-Topp replaces by the new data all stock information stored before.
